

Science-Art Symposium

MECHANISMS OF CHANGE

SEPTEMBER 13 & 14

Intersections of art and science abound, if only you look. Whether in subject matter or process, the two disciplines document and facilitate mechanisms of change in the natural world around us. Join us and explore art, science and the space where the two come together to foster the health and wellness of the environment and humanity. Attend sessions to learn, connect and celebrate the science ecosystem.

Short talks, film, and performance share the multitude of ways humans experience the world around us.
